

Personal agent relay

Your systems reach you on your phone, and cost nothing per message.

LIVE · CONSOLIDATED OFF A PAID SERVER

SCHEMATIC

Consolidated off a rented server. Roughly \$300 a year removed.

\$300+

ANNUAL COST REMOVED

07:00

BRIEF DELIVERED

1

MACHINE, NO SERVER

DECOMMISSION ARCHIVE

WHAT IT IS

The delivery layer for everything scheduled: a morning brief, watchers through the day, voice replies, and a way to launch a long job from a message. It began on a rented server and was deliberately brought home - the server was archived with a verified checksum, the losses were listed and accepted in writing, and the recurring bill went away.

WHAT IT CHANGES

One channel for every system instead of checking five places

A retired component is archived and checksum-verified, never just deleted

Recurring hosting cost removed without losing the capability

Python · PowerShell · messaging API · local models

SOMETHING LIKE THIS, FOR YOUR WORK?

The interesting part is your version of the problem.

Tell me the workflow that costs you the most time or the most trust. I will tell you honestly whether a system fixes it.
