MODES: FULL AND
CONFIDENTIAL

0

SENSITIVE VALUES PRINTED

1

MARKDOWN HANDOFF PER FILE

WHAT IT IS

Two plug-and-play scripts that read one data file and write a Markdown profile of it: structure, types, labels, value ranges, missingness and quirks. The profile is a handoff document, so an analysis script can be designed from it alone. The confidential mode auto-detects identifier columns and never prints one of their values.

WHAT IT CHANGES

Design the analysis from the profile, without needing the data in the room

Sensitive columns are detected automatically, not remembered by the analyst

Same profile format across SPSS, Excel and CSV inputs

R · SPSS .sav · Excel · CSV
