

Facility inventory register

A stock sheet the storeroom can sign, printed the same way every day.

DELIVERED · GENERATED FROM SCRIPT

SCHEMATIC

BELOW REORDER

ITEM	OPEN	IN	OUT	CLOSE
Cleaning · detergent	48	24	31	41
Paint · white 5L	12	0	9	3
Construction · cement	30	20	18	32
Cleaning · gloves	60	0	48	12

Twenty items, three categories, one generator script.

WHAT IT IS

A daily stock movement register for a public-sector facility's supply room, generated by script rather than maintained by hand. Opening stock, received, issued and closing balance per item, with a reorder level, a status cell that colours itself, and named prepared-by and approved-by lines so the sheet carries accountability.

WHAT IT CHANGES

Below-reorder items are visible without anyone doing arithmetic

Print headers repeat, so page two is still readable

Regenerating the workbook is a script run, not an afternoon of formatting

Python · openpyxl · Excel

SOMETHING LIKE THIS, FOR YOUR WORK?

The interesting part is your version of the problem.

Tell me the workflow that costs you the most time or the most trust. I will tell you honestly whether a system fixes it.
