

Benchmark watch

Get told when a source publishes. Never check it again.

LIVE · RUNS THREE TIMES A DAY

SCHEMATIC

Silence is the correct output on most days.

DELIVERY MODES

WHAT IT IS

Three public statistical and tourism publication sources are fetched daily and compared against what has already been seen. Only genuinely new items surface: quietly folded into a morning briefing, or delivered immediately when something significant lands.

WHAT IT CHANGES

Silence when there is nothing new, which is most days

A dead source degrades honestly instead of breaking the run

A redesigned site re-syncs itself instead of firing dozens of alerts

Python standard library · scheduled

SOMETHING LIKE THIS, FOR YOUR WORK?

The interesting part is your version of the problem.

Tell me the workflow that costs you the most time or the most trust. I will tell you honestly whether a system fixes it.
