VISUAL CHECKS

WHAT IT IS

A monitoring report that reads a monthly data load and answers one question for a non-technical reviewer: is this safe to publish? Eleven sections of checks turn into visual findings with the affected records, the rule that fired, and the recommended action.

WHAT IT CHANGES

Findings in plain language, not error codes

Every flag carries the records and the fix, not just a warning

Runs the same way every month, so results are comparable

R Markdown · reproducible reporting

SOMETHING LIKE THIS, FOR YOUR WORK?

The interesting part is your version of the problem.

Tell me the workflow that costs you the most time or the most trust. I will tell you honestly whether a system fixes it.
