ES

WRITTEN IN SPANISH

WHAT IT IS

A written system for handling recurring professional situations - a difficult stakeholder, genuine overload, a decision that must be made on incomplete information - with a five-stage core method, a quick-start card for when there is no time, and templates that make the output reusable: a decision log, an issue tree, a problem-definition canvas, a stakeholder map and a weekly reset. Written in Spanish.

WHAT IT CHANGES

The hard conversations have a prepared route instead of being improvised

Decisions leave a written record of why, so they are not re-litigated

A quick-start card for the times there is no room for the full method

SOMETHING LIKE THIS, FOR YOUR WORK?

The interesting part is your version of the problem.

Tell me the workflow that costs you the most time or the most trust. I will tell you honestly whether a system fixes it.
