

# Legislative disclosure tracker

Make a public filing stream actually readable.

## WHAT IT IS

Congressional stock-transaction disclosures are public but published in a form nobody can read at a glance. This collects them, structures them, and renders a browsable dashboard of who trades what, how often, and how late the filing arrived.

## WHAT IT CHANGES

Six analytical views over a stream that ships as raw filings

Filing delay surfaced as its own measure, not buried

Static site: no server, no database to maintain

Python · static HTML · public filings

SOMETHING LIKE THIS, FOR YOUR WORK?

The interesting part is your version of the problem.

Tell me the workflow that costs you the most time or the most trust. I will tell you honestly whether a system fixes it.
