OFFLINE FILE

WHAT IT IS

The source was a ledger typed by hand: no year on the dates, December filed after February, and categories buried in free text. The report reconciles itself against the recorded balance, shows a pass or fail on screen, and never silently drops a transaction.

WHAT IT CHANGES

A visible seal when the books balance, and the exact gap when they do not

Nothing discarded: unrecognised entries are counted and listed to be fixed

Interactive on screen, clean on paper for the people who print it

SOMETHING LIKE THIS, FOR YOUR WORK?

The interesting part is your version of the problem.

Tell me the workflow that costs you the most time or the most trust. I will tell you honestly whether a system fixes it.
