METERED API CALLS

Any

MODEL CAN RUN IT

WHAT IT IS

An eight-stage transform that takes a researched topic and produces one Learning Pack: intuition before formalism, a worked example, a visual, the objections you will actually be asked and their answers, a real drill on your own work, and a portable quiz that can be pasted into any model for spaced review. A gap radar keeps the backlog filling itself.

WHAT IT CHANGES

Ends with something you can be questioned on, not notes you will never reread

The objections section is written before the meeting, not during it

Review works in whatever model is open, with no metered API

Markdown spec · portable prompts · spaced review

SOMETHING LIKE THIS, FOR YOUR WORK?

The interesting part is your version of the problem.

Tell me the workflow that costs you the most time or the most trust. I will tell you honestly whether a system fixes it.
