

Local dictation

Speak instead of type, anywhere, with nothing leaving the machine.

LIVE · DAILY DRIVER

SCHEMATIC

Hold the hotkey. Speak.

Transcribed on the machine, pasted into the window in front

No audio leaves the laptop. No per-minute billing.

HOTKEY

WHAT IT IS

A global hotkey records, transcribes with a speech model held locally, and pastes the text into whatever window is in front. A small always-on-top badge shows whether it is listening, working or done. It replaced a metered cloud transcription service outright.

WHAT IT CHANGES

Works in any application, not just one editor

No per-minute billing and no audio sent anywhere

Keeps working offline and does not expire

Python · local speech model · Windows

SOMETHING LIKE THIS, FOR YOUR WORK?

The interesting part is your version of the problem.

Tell me the workflow that costs you the most time or the most trust. I will tell you honestly whether a system fixes it.
