Word for word

PRIOR EDITION REPRODUCED

WHAT IT IS

A recurring seventeen-page tourism accommodation publication - cover, contents, notes on the data, a page that shows how every headline figure is calculated, then the figures themselves - produced end to end from one script. It is proved against the previously published edition: run in the prior year's configuration it reproduces that document word for word and number for number, which is what makes the automation trustworthy rather than merely fast.

WHAT IT CHANGES

The publication rebuilds in minutes instead of being assembled by hand

Every headline figure is restated on the page as the division that produced it

Each run prints a confidentiality review naming which pages expose few-responder cells

R · parameterised reporting · PDF composition

SOMETHING LIKE THIS, FOR YOUR WORK?

The interesting part is your version of the problem.

Tell me the workflow that costs you the most time or the most trust. I will tell you honestly whether a system fixes it.
