WHAT IT IS

Notes, sources and synthesis in one structured vault, with generated maps and digests so the right context can be found without reading everything. Two-way sync puts it on the phone, built without paying for a sync service.

WHAT IT CHANGES

Find the relevant note without remembering where it lives

Scales past the point where a flat folder stops working

Same vault on laptop and phone, no subscription

Markdown vault · Python · sync tooling

SOMETHING LIKE THIS, FOR YOUR WORK?

The interesting part is your version of the problem.

Tell me the workflow that costs you the most time or the most trust. I will tell you honestly whether a system fixes it.
