

Field survey digitization

Paper questionnaires become guided tablet forms that work offline.

TWO SURVEYS LIVE ON TABLETS

SCHEMATIC

- ✓ Skip logic runs in the form
- ✓ Reference lists are searchable, not typed
- ✓ Entry guards refuse the impossible value
- ✓ Collects with no signal
- ✗ Free-text where a code belongs

141 columns reconciled back to the layout the analysis expects.

WHAT IT IS

Two further field surveys rebuilt as digital instruments: skip logic and entry guards in the form itself, searchable A-Z airport and city pickers instead of free text, and an adapter that reconstructs the exact wide column layout the downstream analysis expects. Interviewers get fewer ways to enter something wrong; the statisticians get the file they already know how to read.

WHAT IT CHANGES

Bad entries are refused at the tablet, not corrected weeks later

Long reference lists became searchable pickers instead of typed guesses

Works with no signal in the field and syncs when the device is back online

XLSForm · R adapter · offline mobile collection

SOMETHING LIKE THIS, FOR YOUR WORK?

The interesting part is your version of the problem.

Tell me the workflow that costs you the most time or the most trust. I will tell you honestly whether a system fixes it.
