

Systematic trading system

Decide the rules before the money, and hold yourself to them.

PAPER RUN COMPLETE · GATE PASSED 6 / 6

SCHEMATIC

- ✓ Strategy defined in advance
- ✓ Risk per position fixed at 1.3%
- ✓ Paper run completed
- ✓ Supervisor reporting live
- ✓ Comparison arm built
- ✓ Protective orders required

The bar was written before the results. All six had to pass.

DECISION TIMEFRAME

WHAT IT IS

A spot trading bot running a trend-breakout strategy on a fixed risk budget. It ran in paper mode against a promotion gate agreed in advance: six criteria, all of which had to pass before real capital was even eligible. A weekly supervisor reports against it.

WHAT IT CHANGES

The go / no-go bar is written before the results, not after

Fixed risk per position, decided once, applied every time

A controlled comparison arm instead of switching on a hunch

Python · ccxt · scheduled supervision

SOMETHING LIKE THIS, FOR YOUR WORK?

The interesting part is your version of the problem.

Tell me the workflow that costs you the most time or the most trust. I will tell you honestly whether a system fixes it.
